LESSON

## 11-1

Identifying word phrases for different operations can help you understand and write algebraic expressions. This visual map shows the four different operations with key word phrases in boldface.

Word Phrases for Algebraic
Expressions

There are key words and phrases that tell you which operations to use for mathematical expressions.

| Addition <br> (combine) | Subtraction <br> (compare, take <br> away) | Multiplication <br> (put together equal <br> groups) | Division <br> (separate into <br> equal groups) |
| :--- | :--- | :--- | :--- |
| add <br> plus <br> sum <br> total <br> increased by <br> more than | minus <br> difference <br> subtract <br> less than <br> decreased by <br> take away | product <br> times <br> multiply | quotient <br> divide |
| divide by |  |  |  |

Translate words and phrases into mathematical expressions:

| 3 plus 5 | $\longrightarrow$ |
| :---: | :---: |
| 4 less than $p$ |  |
| 15 times $n$ |  |
| $h$ divided by 4 | $\longrightarrow$ |

Class Notes 11-1

## Problem 2

You can use key words to write word phrases for mathematical expressions. You can write different word phrases for the same expression.
$7 k \rightarrow$ the product of 7 and $k$
$8-2 \rightarrow 2$ less than 8
$n+10 \rightarrow 10$ more than $n$
$\rightarrow 8$ minus 2
$\rightarrow$ the sum of $n$ and 10
